

Mygale exports its industrial know-how

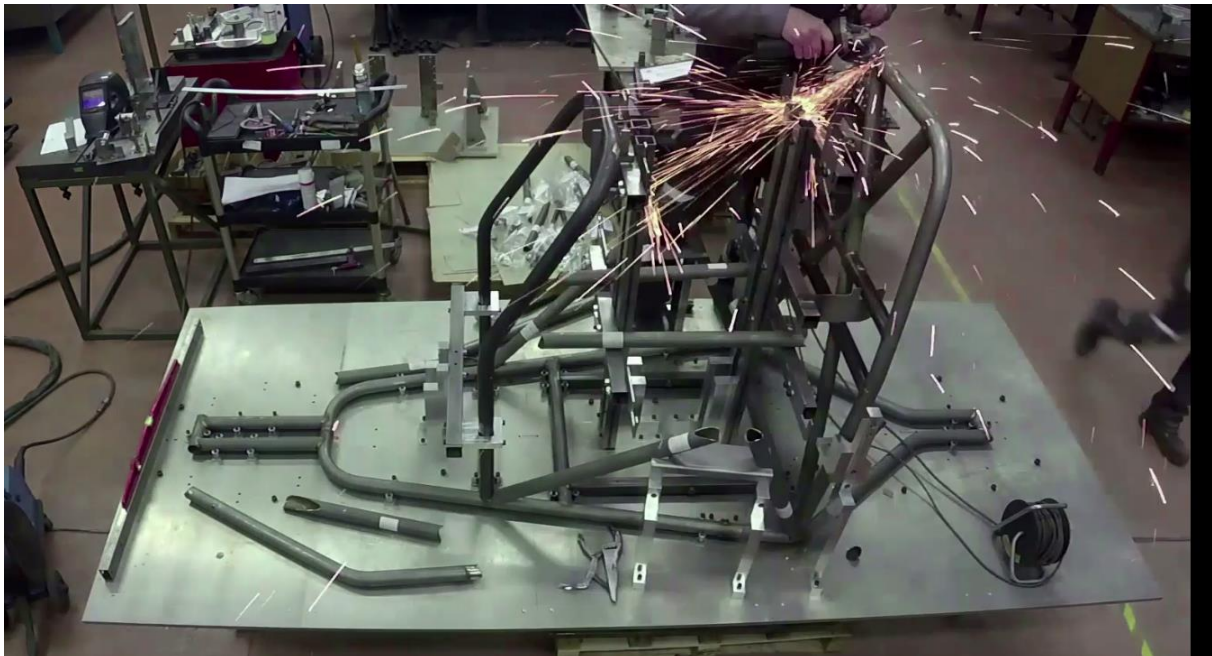

What's happening in XC Cross Car - February 2020

Everyone knows the concept of Ikea kit furniture. You buy a pack of parts with a manual, which you assemble yourself. **MYGALE** has adapted this concept to the FIA XC Cross Car for its worldwide distribution.

MYGALE provides the tools necessary for the manufacture of the bodywork and for the welding the prefabricated assemblies. The **MYGALE** kit also contains all the parts to assemble the Cross Car and the instructions necessary to guarantee FIA quality.

The savings are significant thanks to the exclusive use of local labour, the reduction of transport costs and import duties.

MYGALE supports motorsport federations in developing local skills.
